

Key Benefits

- Up to 10 years of Security Maintenance
- Supporting Ubuntu Classic LTS, including 22.04, 24.04
- Run compliant, security-maintained workloads on Ubuntu
- Exclusive maintenance support for Real Time Kernel and ROS
- Device management tool: Landscape

Why Ubuntu Pro for Devices?

1. Get fixes for critical vulnerabilities in under 24 hours
2. Make your compliance efforts faster and easier
3. Device management and patching automation included
4. Long-term maintenance for real-time kernel and ROS
5. A single service package for fleet-wide IoT security

Introduction

Ubuntu Pro for Devices is a service package that gives device makers access to tools and services for their devices using Ubuntu. With a simple one-time payment, companies can get up to 10 year security maintenance for the main operating system (Ubuntu LTS) and additionally over 25,000 open-source packages in Ubuntu Main and Universe repositories

Every organization faces its own unique set of challenges. Ubuntu Pro empowers teams by providing a single point of access to a range of specialist Canonical technologies that can be tailored to specific needs. Organizations can patch, monitor, and harden their Ubuntu estate while benefiting from expert support.

Ubuntu Certified Hardware - a Canonical certification program	Ubuntu Pro for Devices - a Canonical service offering
Focus on: Hardware: Peripherals functionality	Focus on: 1. Premium features in OS: ROS / Real-time / Hardening / etc. 2. Includes common open-source packages above the OS level
Continuous validation on real hardware in Canonical's lab	
All security updates are tested against customers' hardware → Provide worry-free maintenance for end users	Up to 10 years of security maintenance for the entire software stack. Not tested on the exact hardware, could cause peripheral problems after updates.

Ubuntu Pro for Devices combined with a Ubuntu Certified Hardware offers the best in class Ubuntu experience on devices out-of-the-box for up to 10 years.

Product Features

Non-stop security for CVEs

Coverage for critical, high, and selected medium Common Vulnerabilities and Exposures (CVEs). Critical fixes applied in under 24hr on average

10 years of Expanded Security Maintenance

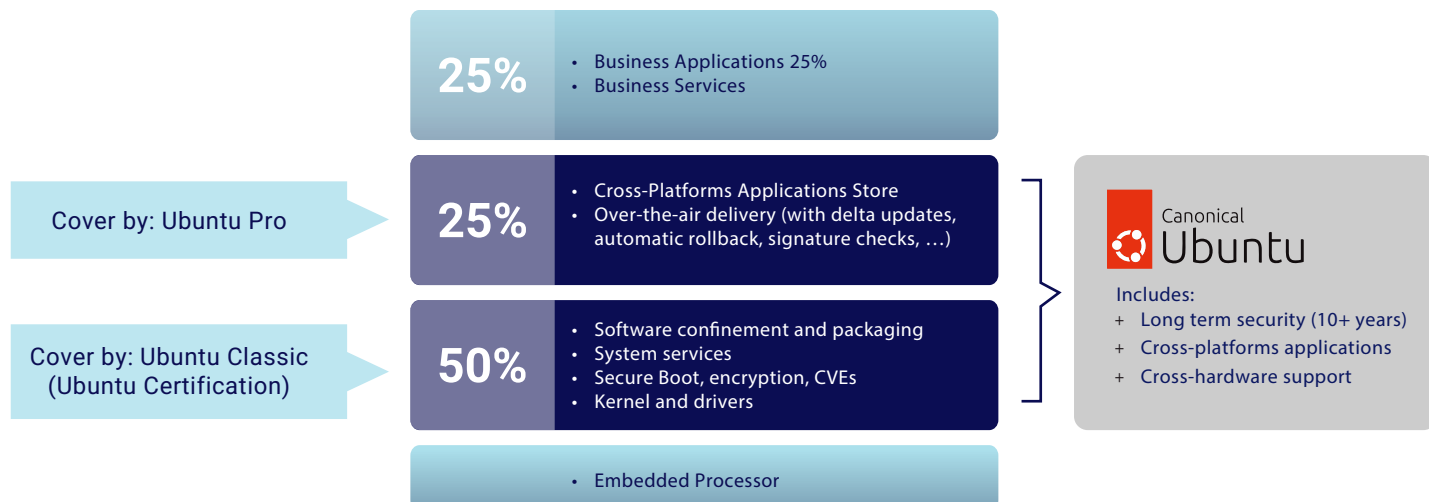

Gain API stability thanks to patches backporting for all Ubuntu debs for ten years on every Ubuntu LTS

All of the open source packages secured

Expanded coverage for over 10x more open-source packages, now including the Ubuntu Universe repository

Zero-Day Vulnerabilities covered

Many zero-day vulnerabilities addressed under embargo

Pricing Model for Ubuntu Pro for Devices

Buckets	Supported Processor
Base	AMD: Kria SOM Nvidia: Orin Nano
Entry	Intel: Atom, Pentium, Celeron Nvidia : Orin NX
Value	Intel: Core i3/i5
High End	Intel: Core i7/i9, Xeon Nvidia Orin AGX
